Requirements to run the project:

- Your workstation should be equipped with the Opencv and numpy library of python and all its modules should be downloaded. To download opencv visit https://opencv.org/releases/
- You should have a functional webcam.

How to run the code:

The easy way is to run the code in your terminal. Open the directory which has the python fille in the terminal. Then type "python camera.py" to run the code. To exit the webcam page press esc. Follow the procedure given in the video for a linux based workstation.
